# W-3100 Pre-Printed Sheeting for Beacons

High Intensity Microprismatic  
Pre-Printed Retroreflective  
Sheeting

W-3100 Metalized High-Intensity Microprismatic Pre-Printed Retroreflective Sheeting is designed for temporary work zone traffic control devices, like beacons. Beacon devices are subjected to some of the worst roadside conditions imaginable. For superior durability, W-3100 is built with a solid layer construction that resists the dirt, grime, and moisture that often destroys air-celled reflective sheeting, causing a critical loss of reflectivity.

## Features and Benefits

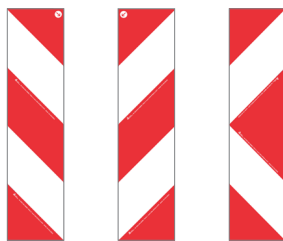

- High-tack adhesive bonds to low surface energy plastics for year-round performance, resisting cold-shock delamination
- Durable construction won't rip or tear during application
- Abrasion-resistant solid layer construction
- Long-range visibility—day and night
- Class EN-12899 / RA2-C DIN 67520 & 6171 compliance
- Durability of up to 3 years, vertical exposure only

## Availability

- Pre-Printed
- Sheets of 0.246 x 1 meter
- Left, Right and Arrow

White / Red
